# SWISS ALUMINIUM PACKAGING NETWORK

From idea to finished product.

# Your partner network for portioned aluminium packaging

We bring ideas to industrialisation. Sharing our expertise and benefiting from more than a decade of common experience, our companies HLM, Datwyler and Rychiger are able to offer a unique range of services along the entire value chain – from raw materials to prototyping to mass production and distribution. As a perfect match in competences we enable our customers to design and standardise highly efficient production processes for portioned aluminium packaging solutions.

SERVICE OFFERING  
HLM

We are specialised in superior high-end cutting and production engineering technologies. Within the Swiss aluminium packaging network, we enable our customers to take the very first step towards industrialisation. We achieve this with the following services:

- Design of product packaging solutions
- Development of forming tools, stacking machines and quality control units
- Prototyping and construction of turnkey production equipment
- Ramp-up of new production lines, process optimisation and training
- Technical support and maintenance services

SERVICE OFFERING  
DATWYLER

We are a global provider of sealing solutions. With our core capabilities in engineering, material and simulation expertise, and processing quality, we are able to achieve industrialisation of the highest standard. In this field we contribute with:

- Highly efficient serial manufacturing processes
- Clean room environment according to the highest standards
- Strong capabilities in various technologies such as high-precision aluminium deep drawing and liquid sealing application
- Proven experience thanks to impressive reference projects in the consumer goods industry

SERVICE OFFERING  
RYCHIGER

We are a leading supplier of customer-specific solutions for filling, sealing and packaging machines. Our products and services for aluminium portion packs are based on decades of experience and state-of-the art technology. We are professionals in:

- Filling and sealing machines as well as turnkey lines for portioned capsules
- Precise filling of powdery, soluble products as well as liquids
- Unique know-how in punching & sealing technologies for a wide range of materials
- Effective support and guidance from product development to successful mass production
- Technical support and maintenance services
